Time Conversion

Code:

```
import java.util.Scanner;
```

```
public class TimeConversion {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        String time = sc.nextLine().trim();  
  
        String period = time.substring(time.length() - 2);  
        String[] parts = time.substring(0, time.length() - 2).split(":");  
  
        int hours = Integer.parseInt(parts[0]);  
        String minutes = parts[1];  
        String seconds = parts[2];  
  
        if (period.equals("AM")) {  
            if (hours == 12) {  
                hours = 0;  
            }  
        }  
        else {  
            if (hours != 12) {  
                hours += 12;  
            }  
        }  
        System.out.printf("%02d:%s:%s%n", hours, minutes, seconds);  
    }  
}
```

Output:

Birthday Cake Candles

Code:

```
import java.util.*;
```

```
public class BirthdayCakeCandles {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);
```

```
  
        int n = scanner.nextInt();  
        int[] candles = new int[n];
```

```
  
        for (int i = 0; i < n; i++) {  
            candles[i] = scanner.nextInt();  
        }
```

```
  
        System.out.println(birthdayCakeCandles(candles));
```

```

        scanner.close();
    }
